# AI-NET-PROTECT – Streaming Telemetry SEASON - Network Digital Twin

Achim Autenrieth, Vignesh Karunakaran

Adtran Networks SE

18/10/2023, TFS#3 Ecosystem Day

# Presentation outline

- Projects introduction
  - AI-NET-PROTECT
  - SEASON
- Our TFS related current and planned activities
  - Optical network controller for disaggregated optical networks
  - Streaming Telemetry
  - Digital Twin

CELTIC-NEXT AI-NET (06/2020 – 12/2024)

# Horizon Europe SEASON

**Duration** 01/2023 – 12/2025  
(36 months)

**Total budget** 6.4 M€

**Coordinator** CNIT

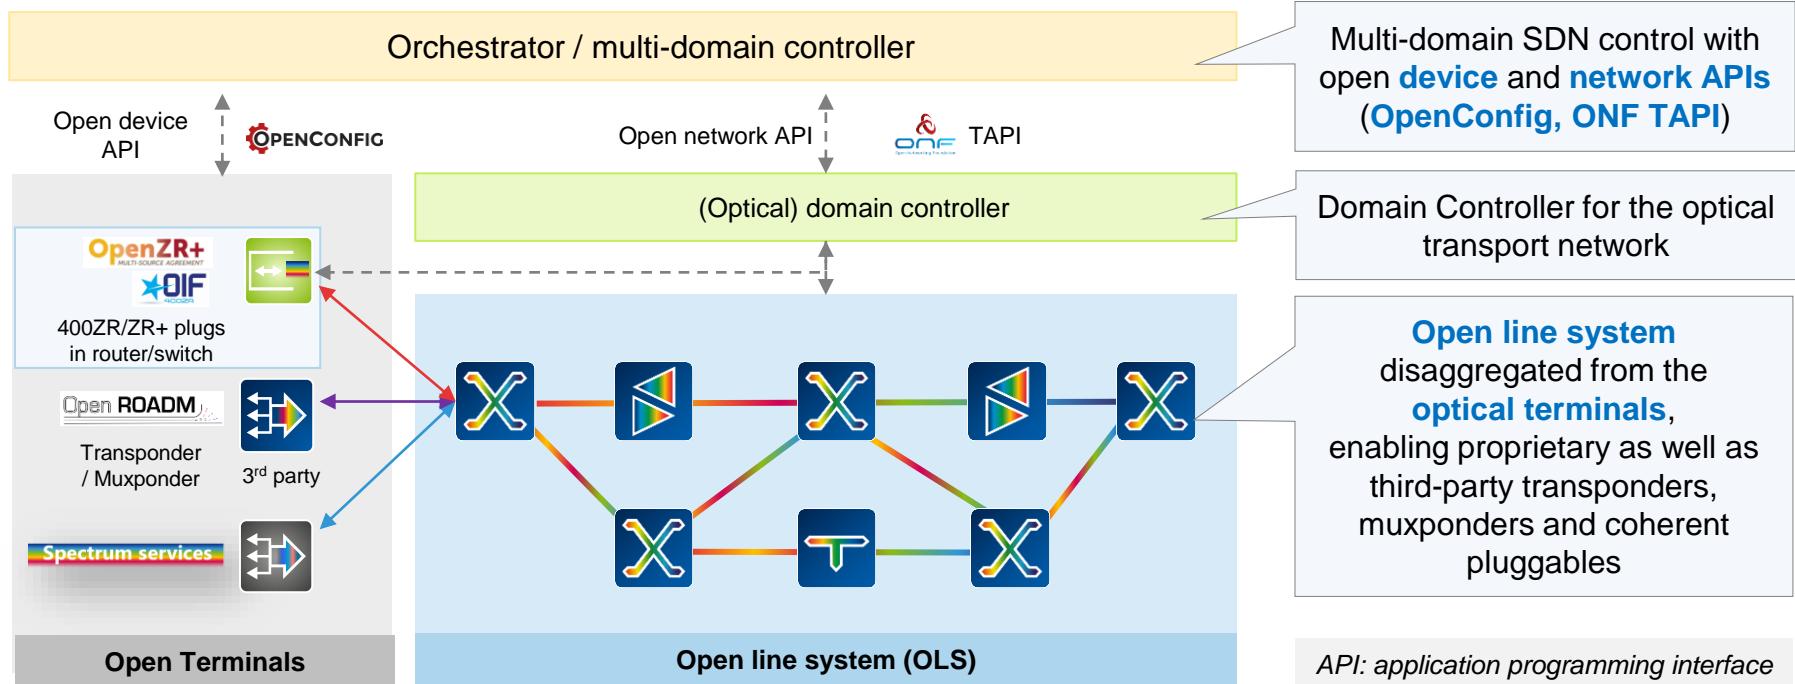

## Objectives:

Design and validate a transport network for 5G and emerging technologies.

- Architecture considers access, aggregation, and the metro/long-haul segments .
- Efficient solutions in terms of capacity and energy efficiency.

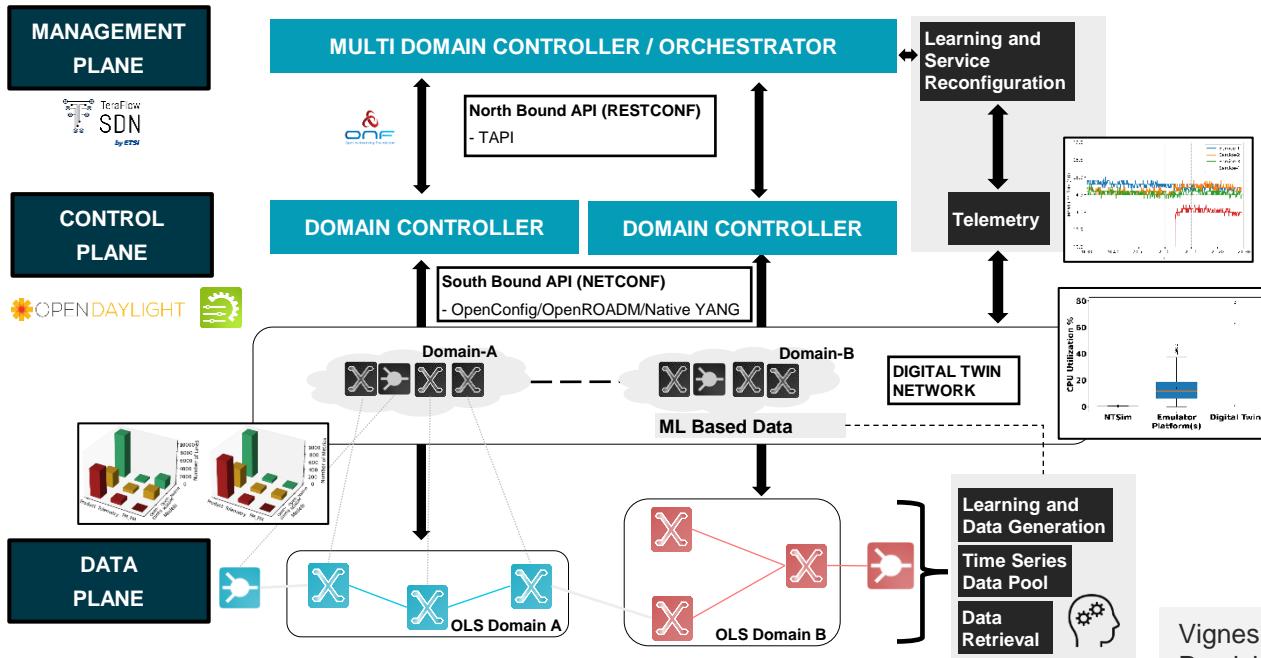

# Disaggregated open optical networking

Moving away from integrated systems to open control and programmability

## RESEARCH HIGHLIGHTS

# Digital Twin for Optical Transport Network

## Use-Cases:

- Closed-Loop Automation
- Assessment of YANG models
- Forecast network behavior

## Publications:

- ITG 2023, APC 2023
- ECOC 2023, P73

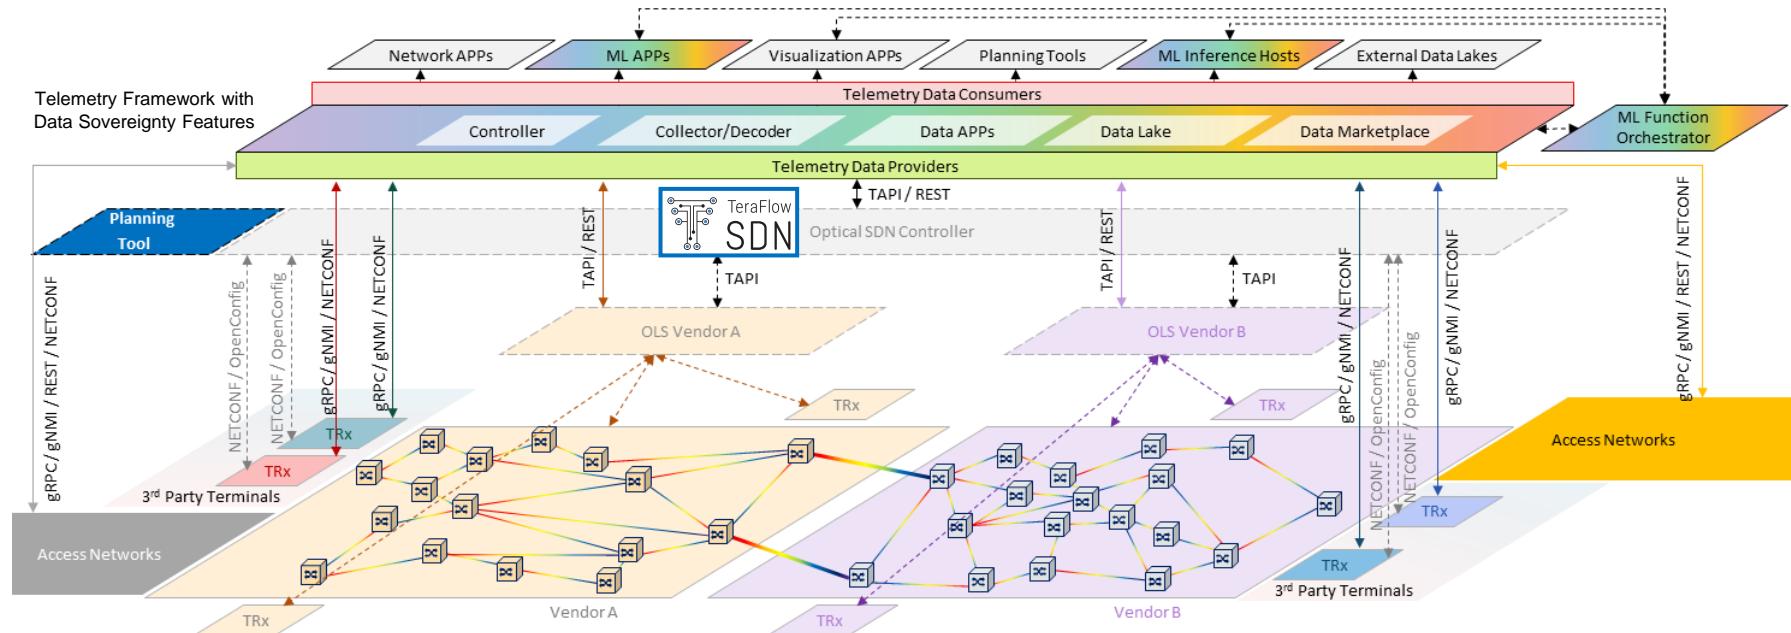

Vignesh Karunakaran, et al., Model-based Service Provisioning in Optical Networks, **ECOC 2023, P73**

Test and evaluate network applications in simulated environment

# Our interest in and activities with TFS

- Network slicing
- TIP MUST reference architecture
- Disaggregated optical network control
- Multidomain orchestrator / optical network controller
- Transceiver configuration
- Evaluation of data models
  - ONF TAPI
  - OpenConfig
  - OpenROADM
- Streaming Telemetry
  - Evaluation of protocols: NETCONF, gRPC, gNMI

# AI-NET-PROTECT reference architecture

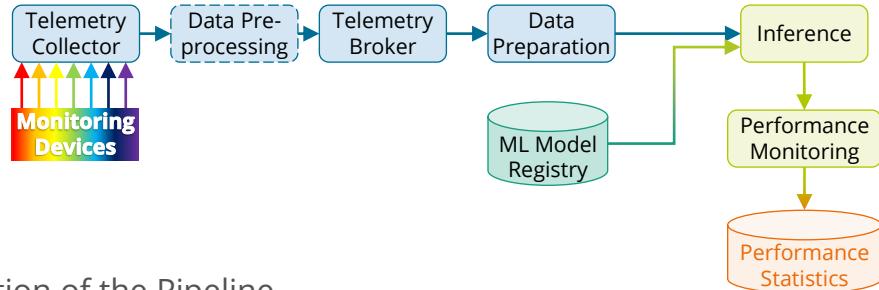

Intelligent telemetry & control, AI-based automation, secure communication

# Telemetry Framework and Pipeline for Network Automation

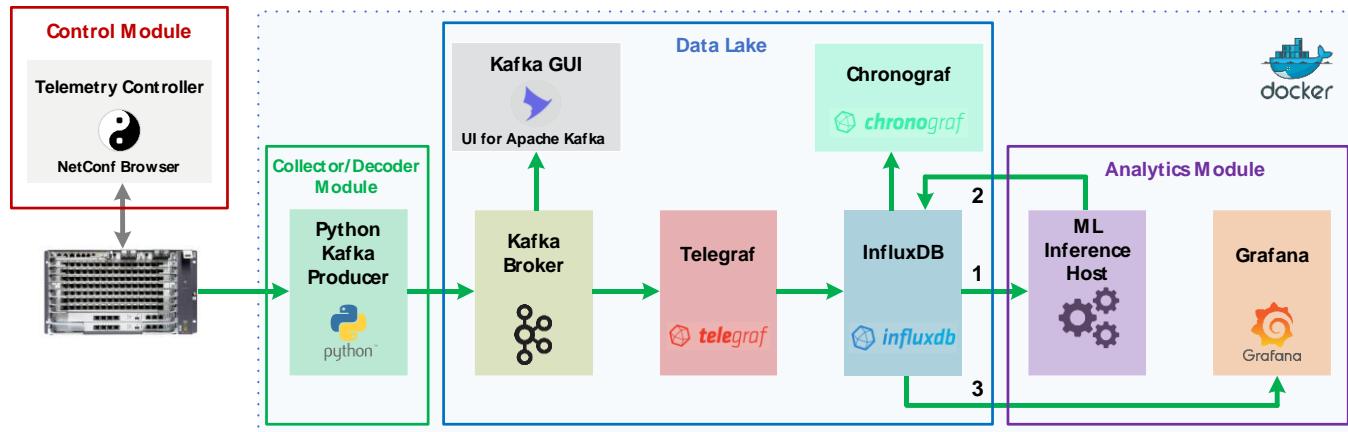

## Identified Requirements

- ❖ Support for Various Telemetry Retrieval Granularities
- ❖ Optimized Storage for the Telemetry Data
- ❖ Computation Resources for Data Analysis
- ❖ Telemetry Collectors, Brokers, and Time-Series Databases
- ❖ Cross-interface and Cross-terminal Telemetry Sharing

Example Implementation of the Pipeline

[HHI] M. Balanici, et al., "Demonstration of a Real-Time ML Pipeline for Traffic Forecasting in AI-Assisted F5G Optical Access Networks," in Proc. ECOC 2022.

# Telemetry Streaming in Partially Disaggregated Optical Networks

## Motivation

- Automation of partially disaggregated optical networks
- systematic approach to telemetry collection and streaming
- allow different data consumers access the data when, where , and how needed

## Use cases

- E2e lighpath performance monitoring
- Impairment validation
  - E.g. terminal and OLS parameters
- Network health monitoring

## Goals

- Multi-protocol telemetry streaming of a partially disaggregated network
- Compare different approaches for telemetry collection
  - streaming directly from the devices
  - streaming from the OLS controller

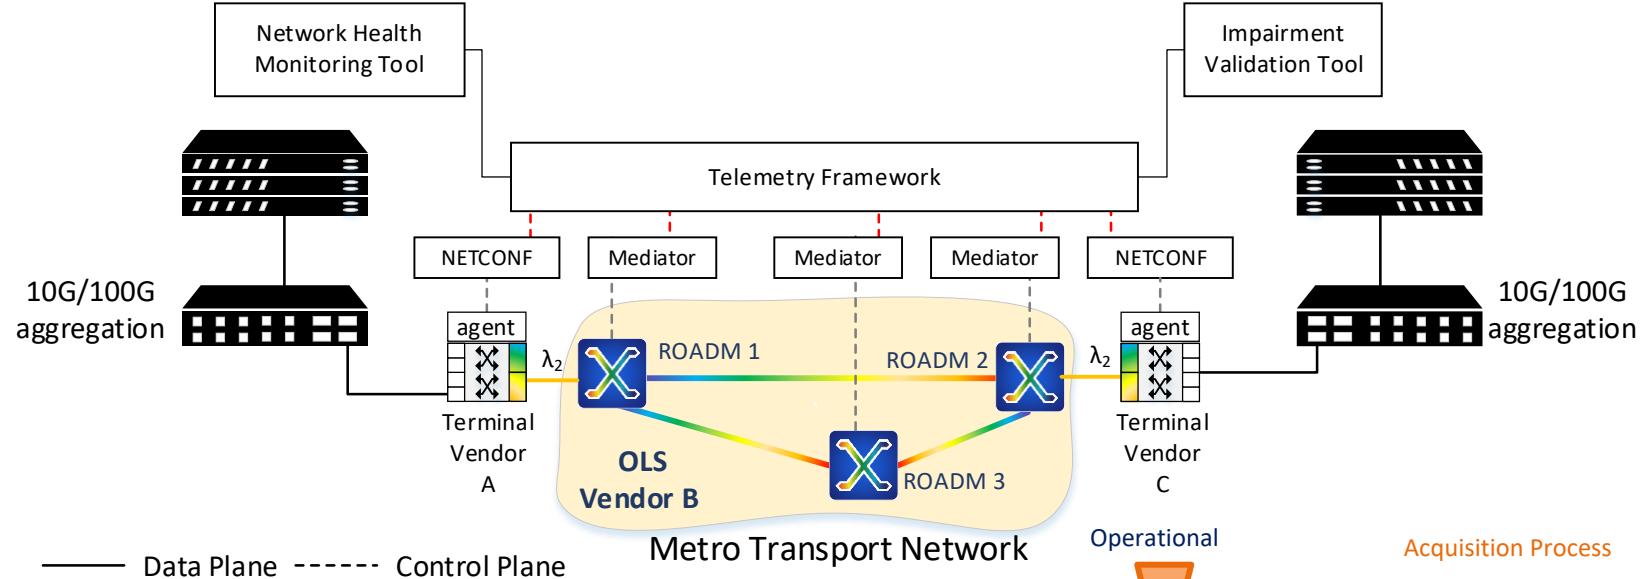

**Goal:** develop and demonstrate a telemetry framework that complies with the requirements of MUST for monitoring of partially disaggregated optical networks

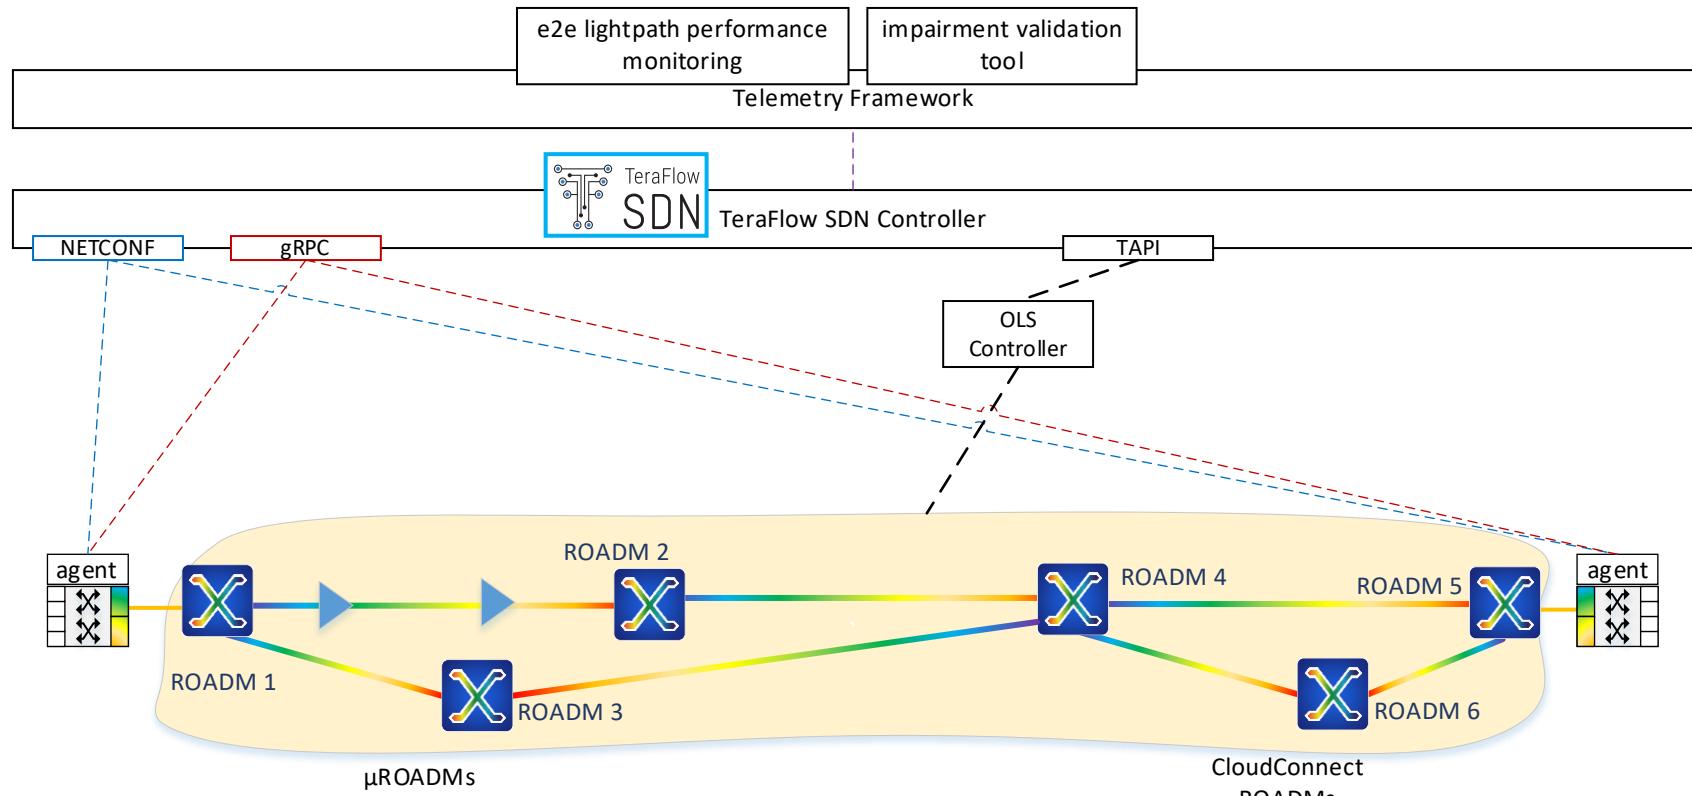

# Open Test Infrastructure for Network Automation

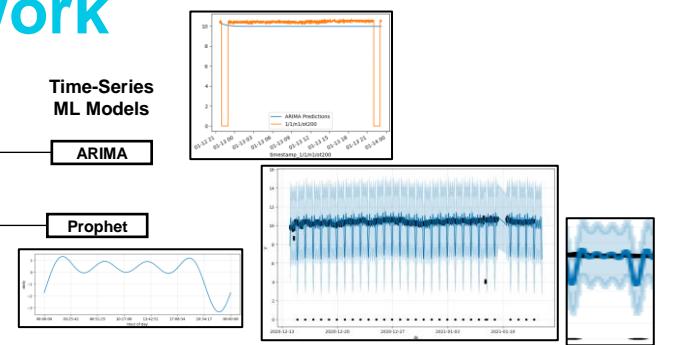

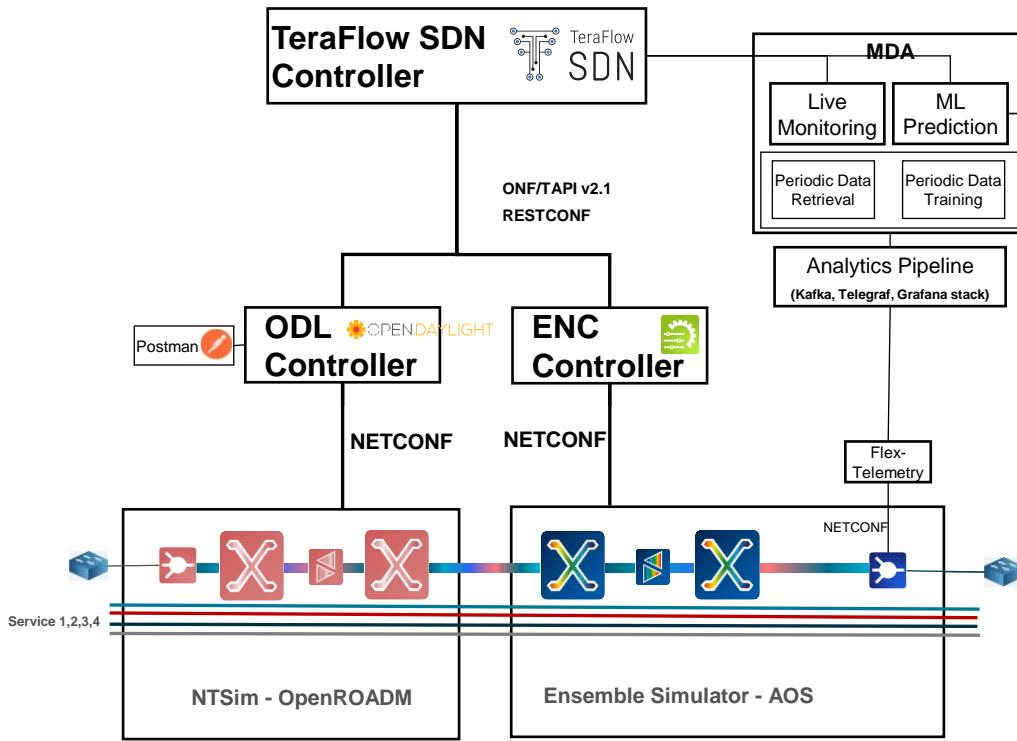

## Integration of Telemetry Framework for the Demonstration - Current

# Planned Telemetry Streaming POC Architecture

# Digital Twin: Optical Transport Network

- USE CASES FOCUSED:**
1. Multi-Domain Optical Network Simulation.
    1. Architecture.
    2. Protocol and Standards maintenance.
  2. Multi-Domain Orchestration.
    1. Optical Service Creation along different domains.
      1. Main Service.
      2. Sub service creation for each domains.
    2. Modification and Deletion of service.
  3. MDA - Modeling and Data Analytics.
    1. Closed Loop Automation.
      1. Using Live monitoring (with WINDOW-ing).
    2. Predictive Maintenance.
      1. ML Based Automation (ARIMA and Prophet).
  4. gRPC vs REST.
    1. Client-Server Implementation.
    2. Protocol Analysis.
    3. Latency, Network Traffic, Payload size are analyzed.

# Key take-aways

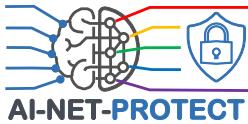

- TFS will be used as multidomain controller for AI-NET-PROTECT TIP Streaming Telemetry POC and SEASON Digital Twin closed loop automation
- Extensions planned on ONF TAPI implementation, optical network and device data models, and Streaming Telemetry protocols
- Close alignment with TIP MUST
- **Interest in alignment and collaboration with other TFS activities on optical network controller, SDN API and streaming telemetry**
