Scope

OpenSlice is an open source, service-based Operations Support System (OSS) prototype for delivering NSaaS and in general NaaS following specifications from main Standards Development Organizations (SDOs), including ETSI, TM Forum, GSMA 3GPP.

OpenSlice was originally developed in the context of EU funded project 5G-VINNI (now completed) and has been adopted and received contribution from several other research projects.

OpenSlice complements other future network activities at ETSI (NFV, ZSM, OSM, TFS) and facilitates prototyping, experimentation and validation of complex telco use cases.

Early experimentation and regular feedback to standardization groups will contribute to higher quality standards and faster time to market.

General usage

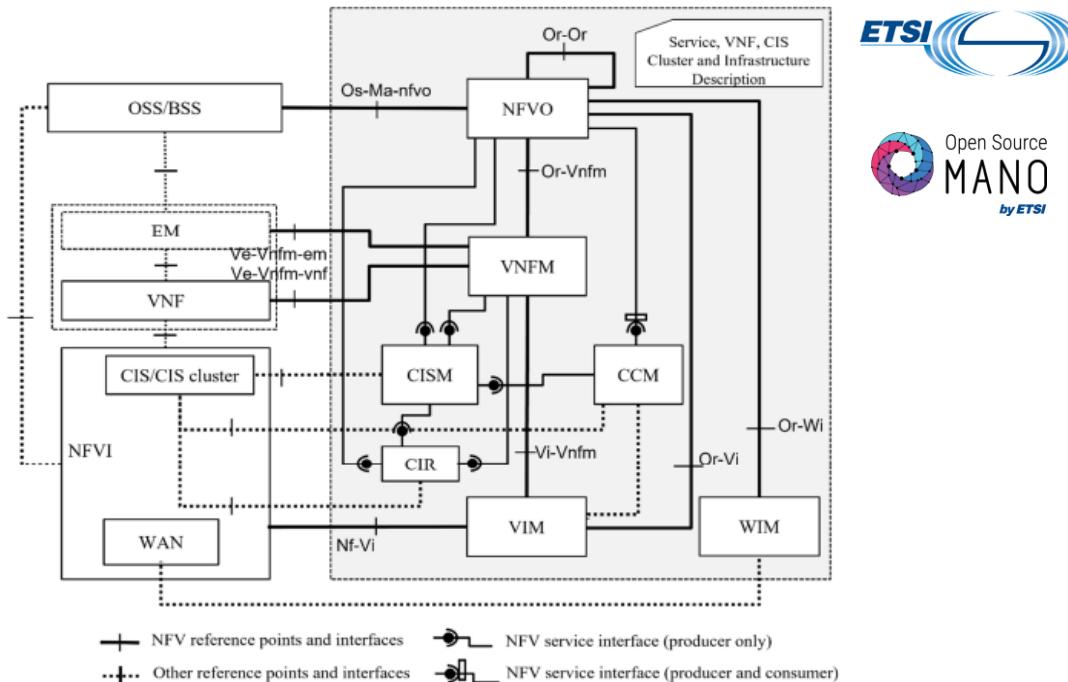

Figure 5.2-3: NFV-MANO architectural framework with support for containers

ETSI GS NFV006

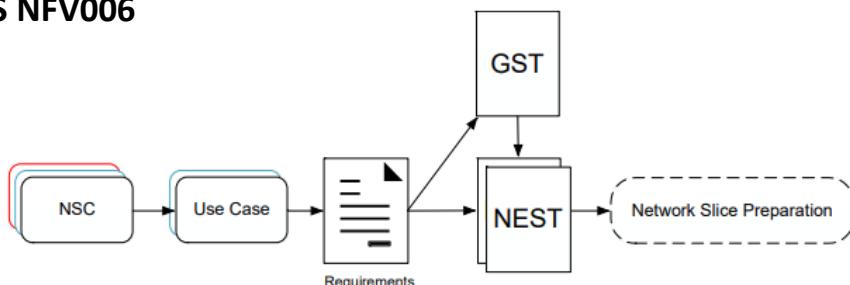

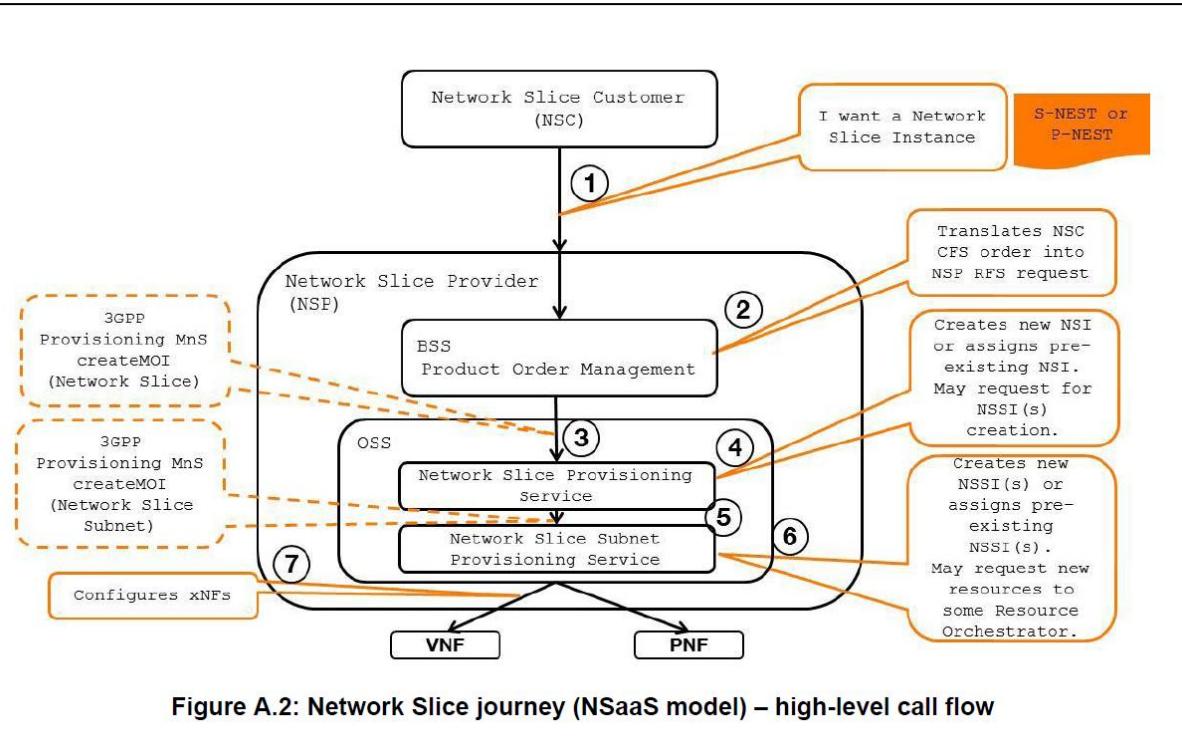

Figure 6.1.1-1: GST and NEST in context of the network slice lifecycle

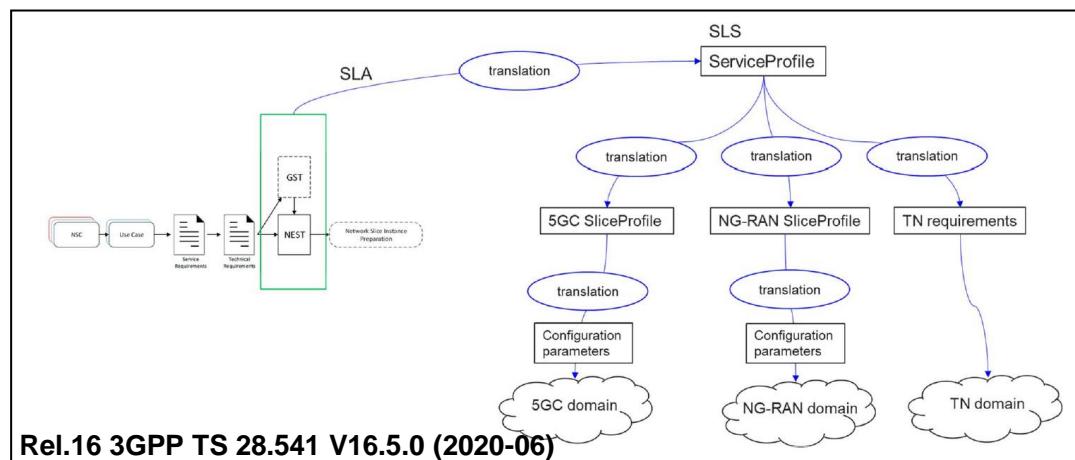

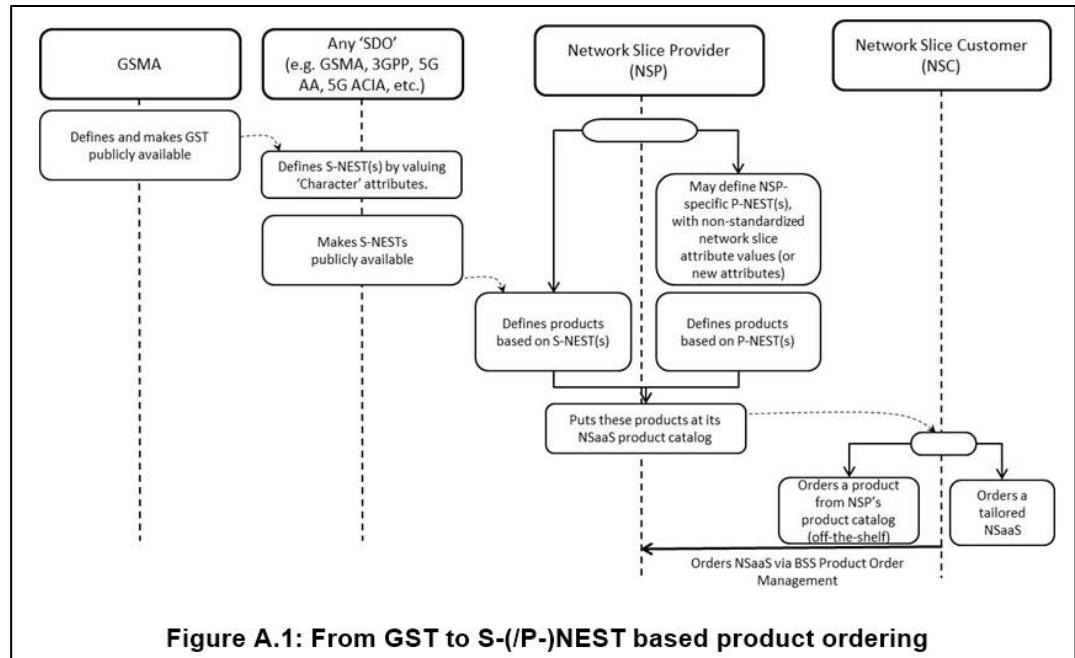

ETSI GS ZSM 0003

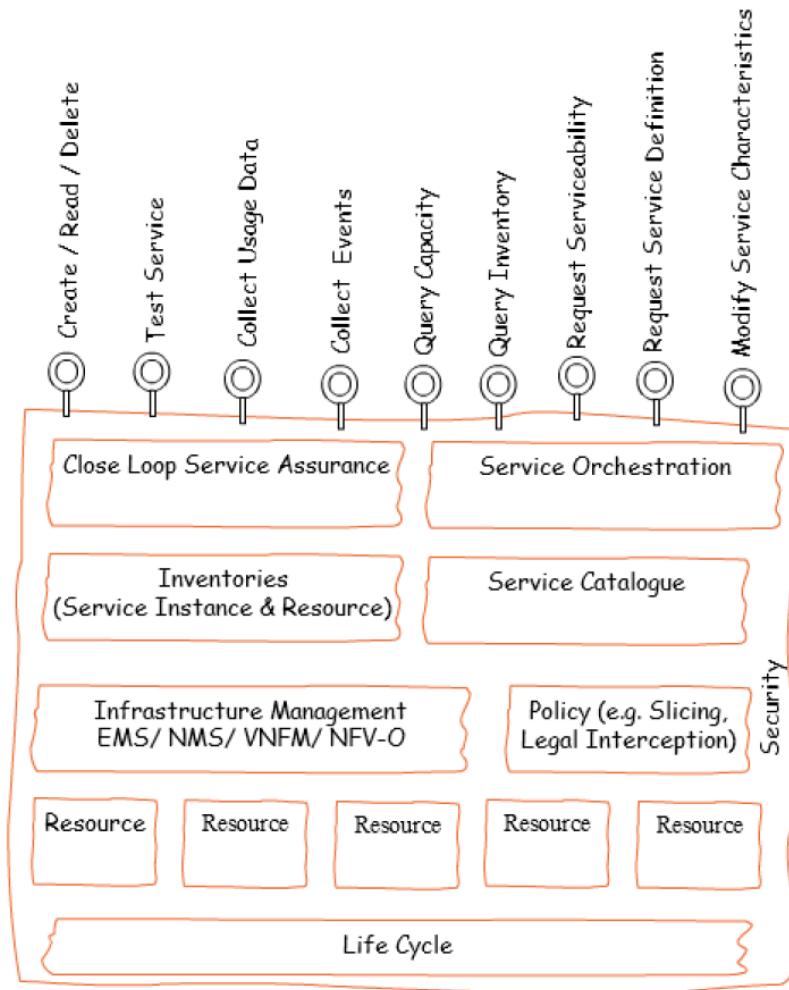

- OpenSlice is an open source Operations Support System (OSS) prototype as described in the **ETSI NFV** Architectural Framework.
- It offers **NSaaS** following **ETSI NFV**, **TMFORUM**, **3GPP** and **ETSI ZSM** principles.
- It exposes **TM Forum OpenAPIs** and interacts with NFV Orchestrators through **ETSI NFV** APIs and Data Models, which makes it interoperable with **Open Source MANO (OSM)**.
- Network Slices are described according to **GSMA Generic Slice Template** characterized to enable exposing **TM Forum NaaS API Suite**.

3GPP Network Slice journey (NSaaS model) - high-level call flow

Release 16 3GPP TS 28.531 V16.6.0 (2020-07)

TMF909 Network as a Service Management API REST Specification (2020)

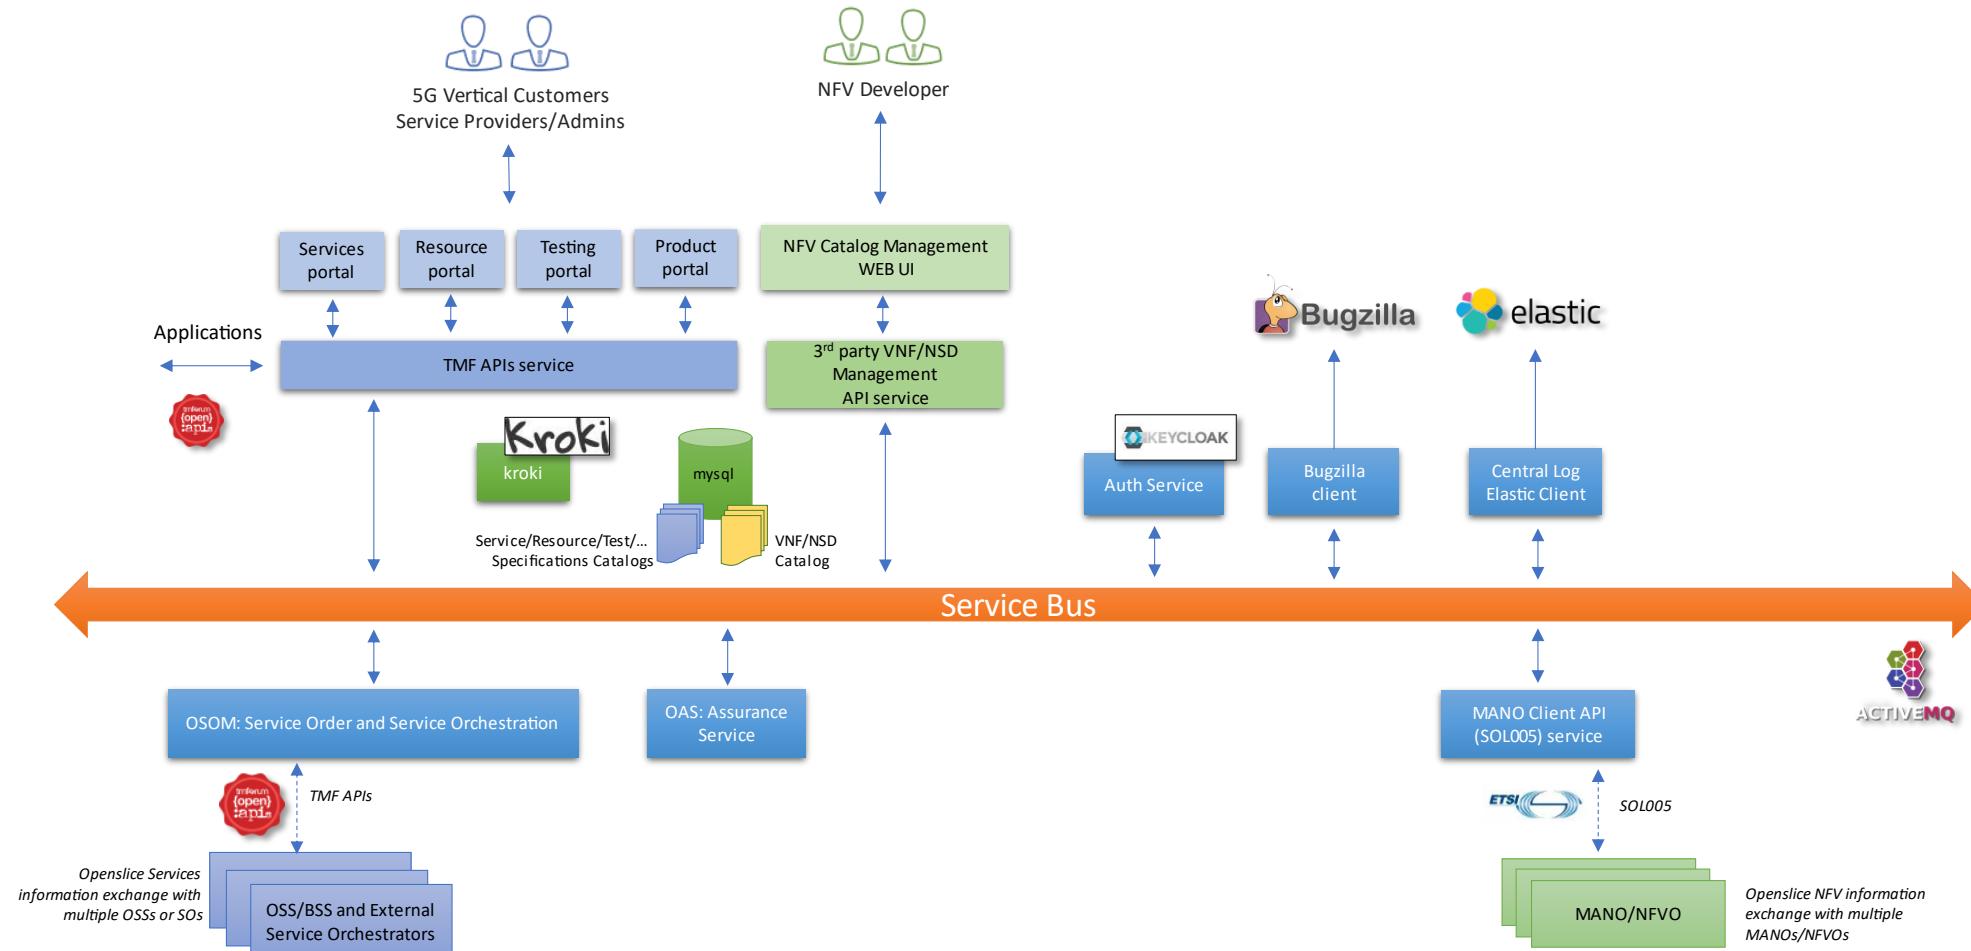

Figure 1. Operational Domain Management Functions and Capabilities

The NaaS API component suite supports the lifecycle functions required to manage the network capabilities exposed as Network as a Service and managed by operational domains.

Architecture and services overview

Architecture

Example UIs

Supported TMF Open APIs

Endpoint	Title	Description	Version
/tmf-api/serviceCatalogManagement/v4	633 Service Catalog Management	Provides a catalog of services.	4.0.0
/tmf-api/productCatalogManagement/v4/	620 Product Catalog Management	Provides a catalog of products.	4.0.0
/tmf-api/productOrderingManagement/v4/	622 Product Ordering	Provides a standardized mechanism for placing a product order.	4.0.0
/tmf-api/resourceCatalogManagement/v4	634 Resource Catalog Management	This is Swagger UI environment generated for the TMF Resource Catalog Management specification.	4.0.0
/tmf-api/serviceInventory/v4/	638 Service Inventory Management	Provides a consistent/standardized mechanism to query and manipulate the Service inventory.	4.0.0
/tmf-api/serviceOrdering/v4	641 API ServiceOrdering	Provides a standardized mechanism for managing Service Order.	4.0.0
/tmf-api/serviceQualityManagement/v2	657 Service Quality Management	This is Swagger UI environment generated for the TMF Service Quality Management specification.	2.0.0
/tmf-api/partyRoleManagement/v4/	669 Party Role Management	This is Swagger UI environment generated for the TMF Party Role Management specification.	4.0.0
/tmf-api/party/v4/organization	632 API Party	Provides standardized mechanism for party management such as creation, update, retrieval, deletion and notification of events.	4.0.0
/tmf-api/agreementManagement/v2/	651 Agreement Management	This is Swagger UI environment generated for the TMF Agreement Management specification.	2.0.0
/tmf-api/resourceOrderingManagement/v4	652 Resource Order Management-v4.0.0	This is Swagger UI environment generated for the TMF 652-Resource Order Management-v4.0.0 specification.	4.0.0
/tmf-api/accountManagement/v4	666 Account Management	This is Swagger UI environment generated for the TMF Account Management specification.	4.0.0
/tmf-api/customerManagement/v4	629 Customer Management	TMF Customer Management	4.0.0
/tmf-api/userinfo	691 Federated ID	TMF Federated ID	1.0.0
/tmf-api/ServiceActivationAndConfiguration/v3/	640 API Service Activation and Configuration	Provides the ability to activate and configure Services.	3.0.0
/tmf-api/alarmManagement/v4/	642 API Alarm		4.0.0
/tmf-api/serviceTestManagement/v4	653 Service Test Management	Provides the ability to manage tests of provisioned Services.	4.0.0
/tmf-api/resourceInventoryManagement/v4	639 API Resource Inventory Management	Provides the ability to manage Resources.	4.0.0
/tmf-api/lcmrulesmanagement/v1/	LCM Rules	Custom API environment for LCM Rules	1.0.0
/tmf-api/resourcePoolManagement/v1	685 Resource Pool Management	Resources that can be reserved are only in one pool.	1.0.0

License Considerations

- Code seeds have been contributed and published under Apache 2.0
- Apache 2.0 will be used in the software developed and published by SDG OSL
- Apache Software License 2.0 is
 - Well-known and widely adopted by the Telecom ecosystem
 - Business friendly
 - Already in use at ETSI in OSM, TeraFlowSDN and ISG ARF
- SDG OSL will not directly develop ETSI standards, only software
 - Standardization work will happen in appropriate groups (TM Forum, 3GPP, ETSI ISG NFV, ETSI ISG ZSM, etc.) according to their IPR rules

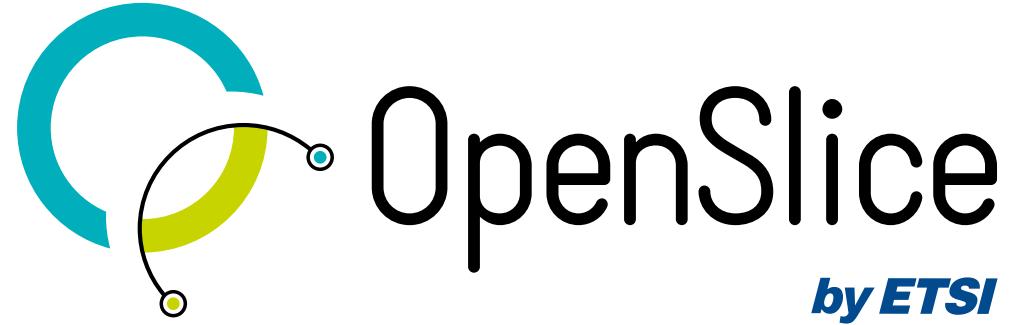

ETSI OSL Founding Members

● ETSI members:

- Telefónica SA, Spain
- University of Murcia, Spain
- Instituto de Telecomunicações, Portugal
- Centre Tecnològic de Telecomunicacions de Catalunya (CTTC), Spain
- University of Patras, Greece

● Participants:

- Ubitech, Greece
- Odin Solutions, Spain
- K3Y, Bulgaria

Thank You!
